

EcoWatt online monitoring service provides you with an online interface to the performance of your solar generator, giving you the ability to visually educate staff, clients and suppliers, and graphically demonstrate your environmental commitment. It gives you real time access to critical data and system reporting metrics. Ingenero continuously monitor and control the solar generation facility to give you detailed information regarding:

- AC Power production on a daily, weekly, monthly and annual basis
- The amount of sunlight available for generation each day
- Avoided emissions and comparative environmental calculations
- Historical production and performance data
- Static information about the solar generator

The EcoWatt monitoring service provides monitoring of the solar system 24/7, all year round. EcoWatt is a remote monitoring package that captures and transmits real-time data on system performance and weather data to Ingenero's analysts.

- This enables Ingenero to:
- Assess the system's operational capacity
- Support automated reporting, billing, fault detection and troubleshooting;
- Fine tune service and maintenance schedules
- Provide you with remote access to real time and historical system data
- Ensure your system is always at optimal capacity working on reducing your carbon footprint.

EcoWatt provides you with live demonstration of your solar system at work simply by logging onto your computer. It is a great way to visually teach the community, your staff and your stakeholders about your sustainable commitment and initiatives.
