World class solar technologies

Tony Knights and his staff from Ingenero are looking forward to meeting people and sharing their extensive knowledge on all things solar at the Home & Lifestyle Expo.

Ingenero, a leading Australian solar power company, understand that choosing a solar power system for your home is a big decision. Once those panels are on your roof, you're going to want them to perform year after year. And not all solar systems are the same. That's why their number one commitment is to deliver the best quality available.

Ingenero built its name in the commercial solar sector and is responsible for some of Australia's most iconic solar installations such the Alice Springs Airport solar power station and Australia's largest flat panel solar installation at the University of Queensland in Brisbane. The same solar design and

consultancy team work on Ingenero's residential solar projects, so you can be confident when you choose an Ingenero solar system that you have chosen well.

Ingenero specialise in the design, construction and operation of utility-scale solar power stations using a variety of world-class solar technologies. They also supply and install PV to residential customers and communities with an industry-leading system guarantee and tailored finance packages. As an established Brisbane based business, their unique point of difference lies in their industry-leading 10-year guarantee on all workmanship and parts, as well as their unique real-time solar monitoring software, EcoWatt. Call in and talk with Tony and his staff at the Ingenero stand and while you're there, ask them about their special expo offer.
